

# Modeling Module 1

August 11, 2020

# Some Definitions

- ▶ Bounded Satisfaction of a path:  $\pi \models_k \phi$ 
  - ▶ SAT of  $\pi$  requires inspecting only a  $k$ -long (or shorter)  $\pi$ -prefix
  - ▶  $\pi$  is  $k$ -bounded lasso  $\implies \pi \models_k \phi$

# Some Definitions

- ▶ Bounded Satisfaction of a path:  $\pi \models_k \phi$ 
  - ▶ SAT of  $\pi$  requires inspecting only a  $k$ -long (or shorter)  $\pi$ -prefix
  - ▶  $\pi$  is  $k$ -bounded lasso  $\implies \pi \models_k \phi$
- ▶ Bounded satisfaction by a TS  $M$ :  $M \models_k \phi$ 
  - ▶ every lasso-shaped  $k$ -bounded path  $\pi$  in  $M$  satisfies  $\phi$

# Some Definitions

- ▶ Bounded Satisfaction of a path:  $\pi \models_k \phi$ 
  - ▶ SAT of  $\pi$  requires inspecting only a  $k$ -long (or shorter)  $\pi$ -prefix
  - ▶  $\pi$  is  $k$ -bounded lasso  $\implies \pi \models_k \phi$
- ▶ Bounded satisfaction by a TS  $M$ :  $M \models_k \phi$ 
  - ▶ every lasso-shaped  $k$ -bounded path  $\pi$  in  $M$  satisfies  $\phi$
- ▶ A *CompletenessThreshold* (CT)  $K$  for an  $(M, \phi)$  is a  $K$  s.t.:
  - ▶  $M \models_K \phi \implies M \models \phi$
