

Modeling Module 1

August 12, 2020

Outline

- ▶ What's a Model?
- ▶ State-Transition Systems (Kripke Structures)
- ▶ Behaviors, Properties, and the Model Checking Problem
- ▶ Modeling and Abstraction
- ▶ Modeling Examples

Some Definitions

- ▶ Bounded Satisfaction of a path: $\pi \models_k \phi$
 - ▶ SAT of π requires inspecting only a k -long (or shorter) π -prefix
 - ▶ π is k -bounded lasso $\implies \pi \models_k \phi$

Some Definitions

- ▶ Bounded Satisfaction of a path: $\pi \models_k \phi$
 - ▶ SAT of π requires inspecting only a k -long (or shorter) π -prefix
 - ▶ π is k -bounded lasso $\implies \pi \models_k \phi$
- ▶ Bounded satisfaction by a TS M : $M \models_k \phi$
 - ▶ every lasso-shaped k -bounded path π in M satisfies ϕ

Some Definitions

- ▶ Bounded Satisfaction of a path: $\pi \models_k \phi$
 - ▶ SAT of π requires inspecting only a k -long (or shorter) π -prefix
 - ▶ π is k -bounded lasso $\implies \pi \models_k \phi$
- ▶ Bounded satisfaction by a TS M : $M \models_k \phi$
 - ▶ every lasso-shaped k -bounded path π in M satisfies ϕ
- ▶ A *CompletenessThreshold* (CT) K for an (M, ϕ) is a K s.t.:
 - ▶ $M \models_K \phi \implies M \models \phi$

Some Definitions

- ▶ Bounded Satisfaction of a path: $\pi \models_k \phi$
 - ▶ SAT of π requires inspecting only a k -long (or shorter) π -prefix
 - ▶ π is k -bounded lasso $\implies \pi \models_k \phi$
- ▶ Bounded satisfaction by a TS M : $M \models_k \phi$
 - ▶ every lasso-shaped k -bounded path π in M satisfies ϕ
- ▶ A *CompletenessThreshold* (CT) K for an (M, ϕ) is a K s.t.:
 - ▶ $M \models_K \phi \implies M \models \phi$
 - ▶ why should such a K exist at all?
